

A black four-bladed propeller is centered against a background of intense orange and yellow flames. The propeller has a central hub with some markings. The blades are curved and have a cup-like shape. The flames are swirling around the propeller, creating a sense of motion and heat.

**INTRODUCING  
MERCURY'S NEWEST  
ALUMINUM PROPELLER**

The Spitfire provides the ultimate performance available in an aluminum propeller. Spitfire is up to 25% faster from 0-20 mph with no penalty in top speed, while providing tenacious holding that will keep you on plane even during tight turns.

**ACCELERATE  
AWAY FROM  
THE COMPETITION**

The 4-blade design allows Mercury engineers to pack more blade area within a smaller diameter. Keeping diameter low allows the prop to spin up quickly for unbelievable holeshot.

Mercury borrowed the Spitfire's low-diameter, high-blade area design from Mercury's Enertia and Fury stainless steel propellers. This design formula provides unheard-of acceleration while still maintaining the top end speed that made the Black Max the world's #1 aluminum propeller.

**HOLD ON!**

The Spitfire's designed from the ground up to be the best-handling aluminum propeller Mercury has ever produced. The Spitfire features an extra cup design coupled with a straight trailing edge (similar to Mercury Racing's Cleaver) for ultimate holding even in the tightest maneuvers.

*Visit your local Mercury Dealer or Mercury's industry-leading prop selector at [mercurymarine.com](http://mercurymarine.com) to find the Spitfire that is right for you.*

# MERCURY SPITFIRE

## ALUMINUM PROPELLER

The Spitfire is designed specifically for boaters using mid-range 25 - 125 HP outboards – including aluminum fishing and pontoon boats.

The Spitfire line also includes three propellers that are designed for the unique demands of pontoon boaters. Spitfire Pontoon propellers provide extra lift and ventilation resistance, to improve both performance and handling.
